Chapter 4.1 Normal Distribution

The normal distribution is the most important continuous distribution (page 1)
continuous distribution and it is fully determined by its (page 1)
by its mean and standard deviation. As sigma grows (page 1)
sigma grows the curve becomes flatter and the peak (page 1)
the peak lower. (page 1)
the most important continuous distribution and it is fully (page 1)
is fully determined by its mean and standard deviation. (page 1)
standard deviation. As sigma grows the curve becomes flatter (page 1)
becomes flatter and the peak lower. (page 1)
normal distribution is the most important continuous distribution and (page 1)
distribution and it is fully determined by its mean (page 1)
its mean and standard deviation. As sigma grows the (page 1)
grows the curve becomes flatter and the peak lower. (page 1)
peak lower. (page 1)
most important continuous distribution and it is fully determined (page 1)
fully determined by its mean and standard deviation. As (page 1)
deviation. As sigma grows the curve becomes flatter and (page 1)
flatter and the peak lower. (page 1)
distribution is the most important continuous distribution and it (page 1)
and it is fully determined by its mean and (page 1)
mean and standard deviation. As sigma grows the curve (page 1)
the curve becomes flatter and the peak lower. (page 1)
lower. (page 1)
important continuous distribution and it is fully determined by (page 1)
determined by its mean and standard deviation. As sigma (page 1)
As sigma grows the curve becomes flatter and the (page 1)
and the peak lower. (page 1)
is the most important continuous distribution and it is (page 1)
it is fully determined by its mean and standard (page 1)
and standard deviation. As sigma grows the curve becomes (page 1)

Chapter 4.2 Normal Distribution

The normal distribution is the most important continuous distribution (page 2)
continuous distribution and it is fully determined by its (page 2)
by its mean and standard deviation. As sigma grows (page 2)
sigma grows the curve becomes flatter and the peak (page 2)
the peak lower. (page 2)
the most important continuous distribution and it is fully (page 2)
is fully determined by its mean and standard deviation. (page 2)
standard deviation. As sigma grows the curve becomes flatter (page 2)
becomes flatter and the peak lower. (page 2)
normal distribution is the most important continuous distribution and (page 2)
distribution and it is fully determined by its mean (page 2)
its mean and standard deviation. As sigma grows the (page 2)
grows the curve becomes flatter and the peak lower. (page 2)
peak lower. (page 2)
most important continuous distribution and it is fully determined (page 2)
fully determined by its mean and standard deviation. As (page 2)
deviation. As sigma grows the curve becomes flatter and (page 2)
flatter and the peak lower. (page 2)
distribution is the most important continuous distribution and it (page 2)
and it is fully determined by its mean and (page 2)
mean and standard deviation. As sigma grows the curve (page 2)
the curve becomes flatter and the peak lower. (page 2)
lower. (page 2)
important continuous distribution and it is fully determined by (page 2)
determined by its mean and standard deviation. As sigma (page 2)
As sigma grows the curve becomes flatter and the (page 2)
and the peak lower. (page 2)
is the most important continuous distribution and it is (page 2)
it is fully determined by its mean and standard (page 2)
and standard deviation. As sigma grows the curve becomes (page 2)

Chapter 4.3 Normal Distribution

The normal distribution is the most important continuous distribution (page 3)
continuous distribution and it is fully determined by its (page 3)
by its mean and standard deviation. As sigma grows (page 3)
sigma grows the curve becomes flatter and the peak (page 3)
the peak lower. (page 3)
the most important continuous distribution and it is fully (page 3)
is fully determined by its mean and standard deviation. (page 3)
standard deviation. As sigma grows the curve becomes flatter (page 3)
becomes flatter and the peak lower. (page 3)
normal distribution is the most important continuous distribution and (page 3)
distribution and it is fully determined by its mean (page 3)
its mean and standard deviation. As sigma grows the (page 3)
grows the curve becomes flatter and the peak lower. (page 3)
peak lower. (page 3)
most important continuous distribution and it is fully determined (page 3)
fully determined by its mean and standard deviation. As (page 3)
deviation. As sigma grows the curve becomes flatter and (page 3)
flatter and the peak lower. (page 3)
distribution is the most important continuous distribution and it (page 3)
and it is fully determined by its mean and (page 3)
mean and standard deviation. As sigma grows the curve (page 3)
the curve becomes flatter and the peak lower. (page 3)
lower. (page 3)
important continuous distribution and it is fully determined by (page 3)
determined by its mean and standard deviation. As sigma (page 3)
As sigma grows the curve becomes flatter and the (page 3)
and the peak lower. (page 3)
is the most important continuous distribution and it is (page 3)
it is fully determined by its mean and standard (page 3)
and standard deviation. As sigma grows the curve becomes (page 3)

Chapter 4.4 Normal Distribution

The normal distribution is the most important continuous distribution (page 4)
continuous distribution and it is fully determined by its (page 4)
by its mean and standard deviation. As sigma grows (page 4)
sigma grows the curve becomes flatter and the peak (page 4)
the peak lower. (page 4)
the most important continuous distribution and it is fully (page 4)
is fully determined by its mean and standard deviation. (page 4)
standard deviation. As sigma grows the curve becomes flatter (page 4)
becomes flatter and the peak lower. (page 4)
normal distribution is the most important continuous distribution and (page 4)
distribution and it is fully determined by its mean (page 4)
its mean and standard deviation. As sigma grows the (page 4)
grows the curve becomes flatter and the peak lower. (page 4)
peak lower. (page 4)
most important continuous distribution and it is fully determined (page 4)
fully determined by its mean and standard deviation. As (page 4)
deviation. As sigma grows the curve becomes flatter and (page 4)
flatter and the peak lower. (page 4)
distribution is the most important continuous distribution and it (page 4)
and it is fully determined by its mean and (page 4)
mean and standard deviation. As sigma grows the curve (page 4)
the curve becomes flatter and the peak lower. (page 4)
lower. (page 4)
important continuous distribution and it is fully determined by (page 4)
determined by its mean and standard deviation. As sigma (page 4)
As sigma grows the curve becomes flatter and the (page 4)
and the peak lower. (page 4)
is the most important continuous distribution and it is (page 4)
it is fully determined by its mean and standard (page 4)
and standard deviation. As sigma grows the curve becomes (page 4)

Chapter 4.5 Normal Distribution

The normal distribution is the most important continuous distribution (page 5)
continuous distribution and it is fully determined by its (page 5)
by its mean and standard deviation. As sigma grows (page 5)
sigma grows the curve becomes flatter and the peak (page 5)
the peak lower. (page 5)
the most important continuous distribution and it is fully (page 5)
is fully determined by its mean and standard deviation. (page 5)
standard deviation. As sigma grows the curve becomes flatter (page 5)
becomes flatter and the peak lower. (page 5)
normal distribution is the most important continuous distribution and (page 5)
distribution and it is fully determined by its mean (page 5)
its mean and standard deviation. As sigma grows the (page 5)
grows the curve becomes flatter and the peak lower. (page 5)
peak lower. (page 5)
most important continuous distribution and it is fully determined (page 5)
fully determined by its mean and standard deviation. As (page 5)
deviation. As sigma grows the curve becomes flatter and (page 5)
flatter and the peak lower. (page 5)
distribution is the most important continuous distribution and it (page 5)
and it is fully determined by its mean and (page 5)
mean and standard deviation. As sigma grows the curve (page 5)
the curve becomes flatter and the peak lower. (page 5)
lower. (page 5)
important continuous distribution and it is fully determined by (page 5)
determined by its mean and standard deviation. As sigma (page 5)
As sigma grows the curve becomes flatter and the (page 5)
and the peak lower. (page 5)
is the most important continuous distribution and it is (page 5)
it is fully determined by its mean and standard (page 5)
and standard deviation. As sigma grows the curve becomes (page 5)

Chapter 4.6 Normal Distribution

The normal distribution is the most important continuous distribution (page 6)
continuous distribution and it is fully determined by its (page 6)
by its mean and standard deviation. As sigma grows (page 6)
sigma grows the curve becomes flatter and the peak (page 6)
the peak lower. (page 6)
the most important continuous distribution and it is fully (page 6)
is fully determined by its mean and standard deviation. (page 6)
standard deviation. As sigma grows the curve becomes flatter (page 6)
becomes flatter and the peak lower. (page 6)
normal distribution is the most important continuous distribution and (page 6)
distribution and it is fully determined by its mean (page 6)
its mean and standard deviation. As sigma grows the (page 6)
grows the curve becomes flatter and the peak lower. (page 6)
peak lower. (page 6)
most important continuous distribution and it is fully determined (page 6)
fully determined by its mean and standard deviation. As (page 6)
deviation. As sigma grows the curve becomes flatter and (page 6)
flatter and the peak lower. (page 6)
distribution is the most important continuous distribution and it (page 6)
and it is fully determined by its mean and (page 6)
mean and standard deviation. As sigma grows the curve (page 6)
the curve becomes flatter and the peak lower. (page 6)
lower. (page 6)
important continuous distribution and it is fully determined by (page 6)
determined by its mean and standard deviation. As sigma (page 6)
As sigma grows the curve becomes flatter and the (page 6)
and the peak lower. (page 6)
is the most important continuous distribution and it is (page 6)
it is fully determined by its mean and standard (page 6)
and standard deviation. As sigma grows the curve becomes (page 6)

Chapter 4.7 Normal Distribution

The normal distribution is the most important continuous distribution (page 7)
continuous distribution and it is fully determined by its (page 7)
by its mean and standard deviation. As sigma grows (page 7)
sigma grows the curve becomes flatter and the peak (page 7)
the peak lower. (page 7)
the most important continuous distribution and it is fully (page 7)
is fully determined by its mean and standard deviation. (page 7)
standard deviation. As sigma grows the curve becomes flatter (page 7)
becomes flatter and the peak lower. (page 7)
normal distribution is the most important continuous distribution and (page 7)
distribution and it is fully determined by its mean (page 7)
its mean and standard deviation. As sigma grows the (page 7)
grows the curve becomes flatter and the peak lower. (page 7)
peak lower. (page 7)
most important continuous distribution and it is fully determined (page 7)
fully determined by its mean and standard deviation. As (page 7)
deviation. As sigma grows the curve becomes flatter and (page 7)
flatter and the peak lower. (page 7)
distribution is the most important continuous distribution and it (page 7)
and it is fully determined by its mean and (page 7)
mean and standard deviation. As sigma grows the curve (page 7)
the curve becomes flatter and the peak lower. (page 7)
lower. (page 7)
important continuous distribution and it is fully determined by (page 7)
determined by its mean and standard deviation. As sigma (page 7)
As sigma grows the curve becomes flatter and the (page 7)
and the peak lower. (page 7)
is the most important continuous distribution and it is (page 7)
it is fully determined by its mean and standard (page 7)
and standard deviation. As sigma grows the curve becomes (page 7)

Chapter 4.8 Normal Distribution

The normal distribution is the most important continuous distribution (page 8)
continuous distribution and it is fully determined by its (page 8)
by its mean and standard deviation. As sigma grows (page 8)
sigma grows the curve becomes flatter and the peak (page 8)
the peak lower. (page 8)
the most important continuous distribution and it is fully (page 8)
is fully determined by its mean and standard deviation. (page 8)
standard deviation. As sigma grows the curve becomes flatter (page 8)
becomes flatter and the peak lower. (page 8)
normal distribution is the most important continuous distribution and (page 8)
distribution and it is fully determined by its mean (page 8)
its mean and standard deviation. As sigma grows the (page 8)
grows the curve becomes flatter and the peak lower. (page 8)
peak lower. (page 8)
most important continuous distribution and it is fully determined (page 8)
fully determined by its mean and standard deviation. As (page 8)
deviation. As sigma grows the curve becomes flatter and (page 8)
flatter and the peak lower. (page 8)
distribution is the most important continuous distribution and it (page 8)
and it is fully determined by its mean and (page 8)
mean and standard deviation. As sigma grows the curve (page 8)
the curve becomes flatter and the peak lower. (page 8)
lower. (page 8)
important continuous distribution and it is fully determined by (page 8)
determined by its mean and standard deviation. As sigma (page 8)
As sigma grows the curve becomes flatter and the (page 8)
and the peak lower. (page 8)
is the most important continuous distribution and it is (page 8)
it is fully determined by its mean and standard (page 8)
and standard deviation. As sigma grows the curve becomes (page 8)

Chapter 4.9 Normal Distribution

The normal distribution is the most important continuous distribution (page 9)
continuous distribution and it is fully determined by its (page 9)
by its mean and standard deviation. As sigma grows (page 9)
sigma grows the curve becomes flatter and the peak (page 9)
the peak lower. (page 9)
the most important continuous distribution and it is fully (page 9)
is fully determined by its mean and standard deviation. (page 9)
standard deviation. As sigma grows the curve becomes flatter (page 9)
becomes flatter and the peak lower. (page 9)
normal distribution is the most important continuous distribution and (page 9)
distribution and it is fully determined by its mean (page 9)
its mean and standard deviation. As sigma grows the (page 9)
grows the curve becomes flatter and the peak lower. (page 9)
peak lower. (page 9)
most important continuous distribution and it is fully determined (page 9)
fully determined by its mean and standard deviation. As (page 9)
deviation. As sigma grows the curve becomes flatter and (page 9)
flatter and the peak lower. (page 9)
distribution is the most important continuous distribution and it (page 9)
and it is fully determined by its mean and (page 9)
mean and standard deviation. As sigma grows the curve (page 9)
the curve becomes flatter and the peak lower. (page 9)
lower. (page 9)
important continuous distribution and it is fully determined by (page 9)
determined by its mean and standard deviation. As sigma (page 9)
As sigma grows the curve becomes flatter and the (page 9)
and the peak lower. (page 9)
is the most important continuous distribution and it is (page 9)
it is fully determined by its mean and standard (page 9)
and standard deviation. As sigma grows the curve becomes (page 9)

Chapter 4.10 Normal Distribution

The normal distribution is the most important continuous distribution (page 10)
continuous distribution and it is fully determined by its (page 10)
by its mean and standard deviation. As sigma grows (page 10)
sigma grows the curve becomes flatter and the peak (page 10)
the peak lower. (page 10)
the most important continuous distribution and it is fully (page 10)
is fully determined by its mean and standard deviation. (page 10)
standard deviation. As sigma grows the curve becomes flatter (page 10)
becomes flatter and the peak lower. (page 10)
normal distribution is the most important continuous distribution and (page 10)
distribution and it is fully determined by its mean (page 10)
its mean and standard deviation. As sigma grows the (page 10)
grows the curve becomes flatter and the peak lower. (page 10)
peak lower. (page 10)
most important continuous distribution and it is fully determined (page 10)
fully determined by its mean and standard deviation. As (page 10)
deviation. As sigma grows the curve becomes flatter and (page 10)
flatter and the peak lower. (page 10)
distribution is the most important continuous distribution and it (page 10)
and it is fully determined by its mean and (page 10)
mean and standard deviation. As sigma grows the curve (page 10)
the curve becomes flatter and the peak lower. (page 10)
lower. (page 10)
important continuous distribution and it is fully determined by (page 10)
determined by its mean and standard deviation. As sigma (page 10)
As sigma grows the curve becomes flatter and the (page 10)
and the peak lower. (page 10)
is the most important continuous distribution and it is (page 10)
it is fully determined by its mean and standard (page 10)
and standard deviation. As sigma grows the curve becomes (page 10)

Chapter 4.11 Normal Distribution

The normal distribution is the most important continuous distribution (page 11)
continuous distribution and it is fully determined by its (page 11)
by its mean and standard deviation. As sigma grows (page 11)
sigma grows the curve becomes flatter and the peak (page 11)
the peak lower. (page 11)
the most important continuous distribution and it is fully (page 11)
is fully determined by its mean and standard deviation. (page 11)
standard deviation. As sigma grows the curve becomes flatter (page 11)
becomes flatter and the peak lower. (page 11)
normal distribution is the most important continuous distribution and (page 11)
distribution and it is fully determined by its mean (page 11)
its mean and standard deviation. As sigma grows the (page 11)
grows the curve becomes flatter and the peak lower. (page 11)
peak lower. (page 11)
most important continuous distribution and it is fully determined (page 11)
fully determined by its mean and standard deviation. As (page 11)
deviation. As sigma grows the curve becomes flatter and (page 11)
flatter and the peak lower. (page 11)
distribution is the most important continuous distribution and it (page 11)
and it is fully determined by its mean and (page 11)
mean and standard deviation. As sigma grows the curve (page 11)
the curve becomes flatter and the peak lower. (page 11)
lower. (page 11)
important continuous distribution and it is fully determined by (page 11)
determined by its mean and standard deviation. As sigma (page 11)
As sigma grows the curve becomes flatter and the (page 11)
and the peak lower. (page 11)
is the most important continuous distribution and it is (page 11)
it is fully determined by its mean and standard (page 11)
and standard deviation. As sigma grows the curve becomes (page 11)

Chapter 4.12 Normal Distribution

The normal distribution is the most important continuous distribution (page 12)
continuous distribution and it is fully determined by its (page 12)
by its mean and standard deviation. As sigma grows (page 12)
sigma grows the curve becomes flatter and the peak (page 12)
the peak lower. (page 12)
the most important continuous distribution and it is fully (page 12)
is fully determined by its mean and standard deviation. (page 12)
standard deviation. As sigma grows the curve becomes flatter (page 12)
becomes flatter and the peak lower. (page 12)
normal distribution is the most important continuous distribution and (page 12)
distribution and it is fully determined by its mean (page 12)
its mean and standard deviation. As sigma grows the (page 12)
grows the curve becomes flatter and the peak lower. (page 12)
peak lower. (page 12)
most important continuous distribution and it is fully determined (page 12)
fully determined by its mean and standard deviation. As (page 12)
deviation. As sigma grows the curve becomes flatter and (page 12)
flatter and the peak lower. (page 12)
distribution is the most important continuous distribution and it (page 12)
and it is fully determined by its mean and (page 12)
mean and standard deviation. As sigma grows the curve (page 12)
the curve becomes flatter and the peak lower. (page 12)
lower. (page 12)
important continuous distribution and it is fully determined by (page 12)
determined by its mean and standard deviation. As sigma (page 12)
As sigma grows the curve becomes flatter and the (page 12)
and the peak lower. (page 12)
is the most important continuous distribution and it is (page 12)
it is fully determined by its mean and standard (page 12)
and standard deviation. As sigma grows the curve becomes (page 12)
